DETAILED ACTION

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Radebold patent (4,127,453) is directed to the conversion of available energy. The Curtis patent (5,238,558) is directed to a magneto-hydrodynamic fluid treatment system. The Meng (5,369,992) patent is directed to seawater magnetohydrodynamic test apparatus. The Mendive patent (6,029,453) is directed to geothermal magnetohydrodynamics. The Van Berkel patent (6,310,406) is directed to a magneto hydrodynamic tidal and ocean current convener. The Warren et al patent application publication is directed to water purification and ion separation. Soviet Union patent 732014 is directed to a mineral concentration magneto-hydrodynamic separator. Japanese patent 59-69190 is directed to magneto hydrodynamic decomposition giving hydrogen. Lang's Handbook of Chemistry shows the potential of chlorine half-reactions.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: the prior art of record shows that apparatus for the treatment of fluid solutions such as seawater in magnetic fields using hydrodynamic principles is known. Figure 7 of Warren et al illustrates apparatus with a conduit in a serpentine or spiral configuration. The prior art does not disclose or suggest apparatus having the particular combination of features recited in instant claim 1 including ion collection chambers on laterally opposed sides outside the conduit and electrodes disposed inside the ion collection chambers.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
